

A powerful message for the mobile enterprise

Now fully-available from Tech Data UK, Samsung Enterprise Edition devices present partners with an excellent opportunity to meet the needs of large customer organisations that are looking for mobile solutions that will deliver excellent productivity and ROI whilst also being totally secure and easy to manage.

SAMSUNG

The Samsung Enterprise Editions are now fully available from Tech Data and with embedded security and a two-year guarantee of warranty cover and availability, they are ideal for organisations looking for devices that will support their digital transformation goals, whilst ensuring compliance and delivering excellent productivity, user satisfaction, and investment protection.

There are five Enterprise Edition devices (see box) – and they come as a complete, all-in-one package including enterprise-grade Knox security, thus giving organisations everything they need to set-up and run an effective and secure mobile ecosystem.

A healthy ecosystem

The Enterprise Editions provide organisations with everything they need to set-up and sustain a healthy, productive mobile ecosystem. The latest Samsung devices will keep teams connected and productive, and they can be easily activated through the Samsung Enterprise Mobility Management (EMM) service, or the Knox Configure console.

With EMM, enterprises can simplify and control policy management across apps and devices, applying the highest security and compliance standards and ensuring data stays safe inside the firewall. It reduces admin workloads and enabled remote location and locking of devices – all through a single dashboard.

In addition, Enterprise Editions come with Knox Configure and Knox E-FOTA on MDM, giving IT admins the ability to customise software to meet the unique needs of their users, test firmware updates with corporate software, and selectively update employee devices.

Assured protection

Crucially, Samsung is also guaranteeing to provide warranty support and availability of the Enterprise Edition devices for two years. In addition, Samsung guarantees that it will provide security patches for four years. This provides solid investment protection and reassurance to any organisation looking to roll-out secure and productive mobile devices for their workforce.

Bradley Nicholson, Samsung Business Development Manager at Tech Data, said: 'Samsung Enterprise Editions is a very special programme. It gives large organisations everything they need to roll-out mobile solutions that will deliver enhanced productivity and are coherent, consistent and secure. They are effective and

beneficial both to the organisation in terms of manageability and investment protection, and for users, who will be given the very best mobile devices and can use them in the full knowledge that they will always be secure.

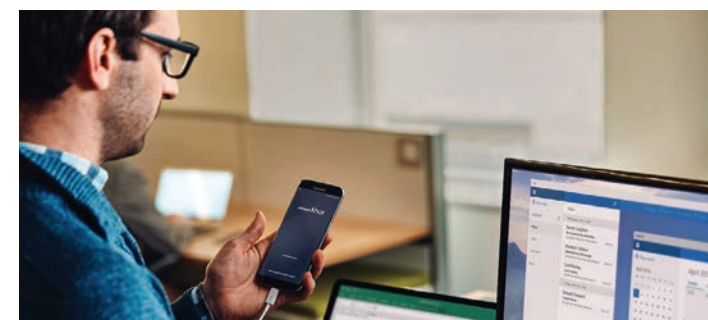

'That's a very powerful set of messages that will resonate with any enterprise IT decision-maker and consequently, Enterprise Editions represent an extremely good opportunity for reseller partners. We will be doing everything we can to support them in taking the proposition into their customer base.'

If you'd like to find out more about the Samsung Enterprise Editions, please email bradley.nicholson@techdatamobile.com.

The Samsung Enterprise Editions available from Tech Data UK

Five Samsung Enterprise Edition devices are available from Tech Data, so there is something to suit every customer need and budget.

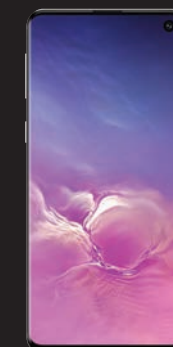

SAMSUNG GALAXY S10E (5352104)

The Galaxy S10e is a slim and compact, dual-SIM smartphone with a 5.8-inch Full HD AMOLED screen with 2280 x 1080 pixels resolution. It comes with 6GB of RAM and 128GB storage and is ideal as a cost-effective device for ultra-mobile workforces.

SAMSUNG GALAXY S10 (5352105)

The S10 has the classic curved-edge design of the S range and features a stunning 6.1-inch Infinity-O Quad HD display (3040 x 1440 pixels) and ultrasonic fingerprint scanner for added security. It has a powerful processor for demanding apps and the PowerShare feature enables users to bring other phones back to life. It is supplied with 8GB RAM and 128GB storage. It's also dual-SIM.

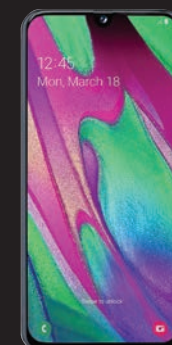

SAMSUNG GALAXY NOTE 9 (5352106)

The Note 9 is an incredibly powerful, large-screen smartphone that comes with a Smart S Pen and advanced features. It comes with 6GB of RAM and 128GB storage. The 6.4-inch Super AMOLED screen has a resolution of 2960 x 1440 pixels. This is a single-SIM phone.

SAMSUNG GALAXY A40 (5352107)

The A40 is a dual-SIM device with a 5.9-inch Infinity-U, edge-to-edge display that provides 1080 x 2340 Super AMOLED resolution. It has an 123° ultra-wide lens and fast charging. The A40 comes with 4GB RAM and 64GB storage.

SAMSUNG GALAXY XCOVER4S (5352108)

This rugged yet slim device is perfect for construction or any outdoor mobile workforce that needs to be able to make use of the latest technology in challenging conditions. It meets the IP68 standard for dust- and water-resistance and combines power with simplicity, with a 5-inch 1280 x 720 display offering, 3GB of RAM and 32GB of storage. It also has dual-SIM capability.
